

PanelWhiz Data Retrievals using the HILDA

<http://www.panelwhiz.eu>

Dr. John P. Haisken-DeNew
Nov 2006

PanelWinz

Main Idea

- New method for dealing with potentially ANY panel data set
- Vector-orientation, modularization, standardization
- All done within the comfortable Stata environment. Stata rules!

Key Concepts

- Item: vector of variables, i.e. `wscg: awscg, bwscg, cwscg, ...`
- Plugin: a Stata ADO to data clean an item, i.e. `oz_wscg.ado`
- Project: a file containing a collection of items, i.e. `wages.hilda`
- Local Library: a collection of projects in a directory, i.e. `*.hilda`
- Web Library: a collection of projects (web), i.e. `*.hilda`

*! Possible     : a b c d
*! Changes      : a b c d
-----
>

pwplugin begin, item(wscg) year(2004)

        .plugin.newitem
        .action.real, thisyear

pwplugin end
end
```

pwplugin begin, item(wscg) year(2004)

.plugin.newitem

.action.real, thisyear

pwplugin end

this is what the plugin does - it creates a new variable and deflates based on the current year deflator

IMPORTANT NOTE: In the (i) first available footnote (or endnote) of the report or on the first available text page of the report, or (ii) in the data description section, the following citation is required by your PanelWhiz contract:

The data used in this paper were extracted using the Add-On package PanelWhiz v1.0 (Oct 2006) for Stata. PanelWhiz was written by Dr. John P. Haiken-DeNew (john@panelwhiz.eu). The following authors supplied PanelWhiz HILDA Plugins used to ensure longitudinal consistency, Markus Hahn (1). The PanelWhiz generated DO file to retrieve the HILDA data used here and any PanelWhiz Plugins are available upon request. Any data or computational errors in this paper are my own. Haiken-DeNew and Hahn (2006) describe PanelWhiz in detail.

References:

PanelWhiz: A Flexible Modularized Stata Interface for Accessing Large Scale Panel Data Sets

John P. Haiksen-DeNew¹ (RWI Essen) and Markus Hahn (RWI Essen, Uni Bochum)

This Documentation Version: Sep 2006 (version 1)

Abstract: This paper outlines a panel data retrieval program written for Stata/SE or better, which allows easier accessing of the household panel data sets. Using a drop-down menu system, the researcher selects variables from any and all available years of the panel. The data is automatically retrieved and merged to form a "long file", which can be directly used by the Stata panel estimators. The system implements modular data cleaning programs called "plugins". Yearly updates to the data retrievals can be made automatically. Projects can be stored in libraries allowing modular administration and appending.

Keywords: Panel data storage and retrieval, SOEP, HILDA

JEL: C81, C87, C23

Data Packages to be added soon:

CPS-MORG from NBER (1996-2005) American Current Population Survey (CPS) Monthly Outgoing Rotation Groups. Extract is from the NBER.

CPS-MORG from CEPR (1996-2005) American Current Population Survey (CPS) Monthly Outgoing Rotation Groups. Extract is from the CEPR.

SIPP from CEPR (1990-2001) American Survey of Income and Program Participation (SIPP). Extract is from the CEPR.

Mikrozensus (1996-2004) Germany's CPS.

IAB-Betriebspanel (1993-2004) German IAB-Nuremberg's Firm Panel

Date	Area	Description
2006.11.14	ALL/base	Simplified code and took care of odds and ends.
2006.11.13	SOEP/base	Fixed a bug in proggen: Could not previously force a balanced panel of respondents. In the past, one always got an unbalanced panel (i.e. maximum information). This has been fixed. Thanks to Sonja Kassenboehmer, RWI Essen for pointing this out. For those using spouse information, using a balanced panel forces also the spouse info to be balanced also, otherwise it is empty.
2006.11.11	ALL/base	Restructured the drop-down menus and project pages. Now they are much simpler in structure. Now almost everything can be reached by the "Start Page" or the "Project Page" and clicking on a smcl page.
2006.11.11	BASE	Edited data export routines (SAS, SPSS, GAUSS, LIMDEP) to allow support for longer var names.
2006.11.11	ALL/base	Now support for opening retrieved data and documentation files by clicking on a smcl page.
2006.11.08	HILDA/base	Now support for including ALL project variables additionally as "partner"/"father"/"mother" variables. The user simply includes the variable "_all". Thanks to Deborah Cobb-Clark, ANU for this

What must users of PanelWhiz do?

- in Australia, donate directly to UNICEF \$20 per dataset/year
- must cite using PanelWhiz in any papers, presentations etc
- must cite using any PanelWhiz Plugins from other persons

Must one use PanelWhiz to use the HILDA data?

- No! But PanelWhiz sure is efficient! Excellent for workgroups!
- PanelWhiz is an improvement to an already excellent dataset
- PanelWhiz offers a common interface for ANY data set

Thanks to...

- M. Wooden, N. Watson, S. Freidin, D. Cobb-Clark
